The aluminum joinery department was established in 2003. The department comprises a team of qualified technologists with many years of experience, actively participating in training and constantly improving their qualifications. The aluminum joinery department designs aluminum joinery from PONZIO and Aluprof aluminum profiles. In addition to the production of joinery for the SOLGRUD company needs, the specialists design, calculate and install joinery for other companies throughout the country. The scope of activity of the aluminum department extends outside Poland. The team has produced joinery for clients from Germany, Norway, Panama or Italy.

- consulting and technological support
- many years of experience
- modern machinery park
- projects across the country
- wide range of offers

Library, Świecie
